

The main relief-forming factors of asymmetry of river valleys within the central part of East European Plain

Kazan Federal University, 420008, Kremlevskaya 18, Kazan, Russia

Abstract

© Published under licence by IOP Publishing Ltd. The article examines the spatial distributions of asymmetry types in the slopes of the river valleys in the central part of the East European Plain. Five types of asymmetry are found in the studied region: planetary, climatic, hydrodynamical, structural (tectonic) and topographic.
